C-O-N-F-I-D-E-N-T-I-A-L

-2.

Up to the end of 1955 LJJ operated old machinery, but between 1955 and November 1956, about 25 percent of the machinery installed was new and came from the Hungarian Csepel and Gamma plants.

5. The civil defense shelters constructed in the area during WW II were maintained. In 1955 construction began on a new shelter and was to have been finished in 1957. Civil Defense drills were constantly taking place.

COMPEDENTIAL

LEGEND TO DRAWING OF LJJ FACILITIES

- 1. Civil defense shelter, about eight meters underground.
- 2. Main section where the Directorate is located in a three-story building.
- 3. Personnel Section
- 4. Wage Section
- 5. Turnaround
- 6. Main Assembly Hall, made of brick, with V-shaped glass roof. It is about 600 meters by 600 meters and is about 14 meters high.
 - a. Copper shop
 - b. Boiler shop
 - c. Shifting tracks; there are six tracks in a row.
 - d. Lathe shop where drilling, cutting and polishing is done.
 - e. Air Brake Shop for maintenance of Westinghouse type air brakes.
 - f. Dismantling Section
 - g. Rack where locomotives can be raised.
 - h. Engineering offices for draftsmen and foremen.
 - i. Time clocks
 - j. Parts testing shop where parts are tested by hydraulic pressure.
 - k. Copper Shop Lathe
 - Bearing and smelting shop. Bearings made here are also cut, ground and polished.
 - m. Wash shop for cleaning chemicals and oil off parts
 - n. Chimney under which locomotives building up steam are fired.
 - 7. Storage, one-story building, made of brick with V-shaped slate roof and also with sky lights. It is about 250 meters by 15 meters. Small parts, screws and bolts are stored here.
 - 8. Tempering and hardening shop about 20 meters x 20 meters, made of brick, with V-shaped roof.
 - 9. Shunting track

CONFIDENTIAL

- 10. Locker and shower room, three-story brick building with flat roof. Under this building there was supposed to be a 12-meter deep Civil Defense shelter constructed in 1955.
- 11. Spring, hardening and tempering shop. Its size is the same as Number Seven.
- 12. Foundry. It has several chimneys.
- 13. This is called Section Number Seven. It is the lathe shop for locomotive wheels and axles. Four rows of Hungarian-made lathes are in operation here. They are in good condition.
- 14. Water tower, about 150 meters high, of reinforced concrete.
- 15. Cultural activities building which is a one-story brick structure, about 500 meters x 30 meters. It consists of one large hall which is used as a theater and a club.
 - a. Mess hall
 - b. Wall with large door on it
 - c. Canteen
 - d. Library
- 16. New sport gymnasium finished in 1956, of reinforced concrete.
- 17. Large hall. Exact purpose unknown.
- 18. This was known as Section Eight. It actually is the freight car and passenger car repair shop. It has a glass roof and is about the same size as Number Six.
- 19. Boiler house with power station. Electric current, steam and air pressure is generated here. It is about 40 meters x 60 meters x 15 meters.
 - a. Boilers
 - b. Chimney
 - c. Generators for electric current.
- 20. Gas generator
- 21. Large locomotive parts such as wheels and pig iron were stored here.
- 22. Cement, concrete and lumber storage.
- 23. Lumber and wooden beams and such located here.
- 24. Forge shop.

CORFIDENTIAL

CONFIDENTIAL

- 25. Restricted area within one-story building. Military sentries were on duty. I was never inside this building.
 - a. Wire fence
- 26. Carpenter shop
 - a. Electricians
- 27. Maintenance shop for the plant itself. Size of building same as Number Seven. The roof was V-shaped and made of slate.
- 28. Lumber storage. The structure was made of wood and it had a V-shaped roof covered with tarpaper.
- 29. Open repair shop. The area is about the same as Number Six. This section had no side walls only a roof. Outside work on freight and passenger cars was done here. The roof was probably of corrugated iron. This structure was still in construction in November 1956.
- 30. Electric power house for railroad line. It contains electric signal switches, lights, etc. The building is four stories high and has large glass windows. The roof is flat. There was a two-three meters high barbed wire fence around this building.
- 31. The entire plant was surrounded by a 2.5 meter high barbed wire fence.
- 32. Elevated railroad track running on a dam.
